

MarketsGrid vs AdapTable — Gap Analysis

A feature-by-feature comparison of the MarketsGrid product surface ([@starui/grid](#) , the customizer modules, profile manager, data providers, OpenFin integration) against AdapTable for AG Grid.

Sources:

- MarketsGrid: [docs/current-features.md](#) and the [packages/](#) source tree.
- AdapTable: the full doc tree under https://www.adaptabletools.com/docs/* (Getting Started → Framework Versions → Layouts → UI → Core Features → Searching & Filtering → Cell Rendering → Editing → Annotating → Working with Grid Data → Advanced Features → Developer Guides → AdaptableQL → Partners → Technical Reference).
- Crawl date: 2026-05-23.

1. Executive summary

Headline parity: $\approx 43\%$ (weighted by importance for a trading grid).

MarketsGrid covers the **foundations** of an AdapTable-class product — profile persistence, formatting/conditional styling, expression-driven calculated columns, OpenFin integration, real-time data plumbing — but is short on **trader-facing analytics surfaces** (alerts, flashing, styled columns, sparklines, pivot, summarisation), **collaboration** (team sharing, notes/comments, row forms), and **report-tier exporting** (Visual Excel, scheduling, custom destinations). It also lags on **editing ergonomics** (Smart Edit, Bulk Update, Plus/Minus, Shortcuts, data-change history UI).

Where MarketsGrid is **at or near parity** ($\geq 75\%$): conditional styling, display formatters, the profile/state system, AG Grid integration depth, and the OpenFin runtime seam.

Where MarketsGrid is **dramatically behind** ($\leq 20\%$): alerts, flashing, styled columns (gradient / percent bar / badge / sparkline), Smart-Edit-class editing, Visual Excel + scheduled reports, Notes/Comments, Row Forms, Schedules/Reminders, AdaptableQL aggregation/observable expression families.

2. Methodology

Each AdapTable feature category was scored against MarketsGrid on a **0 / 25 / 50 / 75 / 100** coverage scale:

- **0** — Not implemented (no surface, no engine support).
- **25** — Token / partial primitive exists but no UI module or wiring.
- **50** — Half-built — primitive plus some UI, missing major sub-features.
- **75** — Mostly there — primary use cases covered, edge cases missing.
- **100** — Full or stronger equivalent.

Each category is weighted **1–10** by importance for a capital-markets grid (10 = critical, 1 = niche). Overall parity is the weighted average.

The matrix below is **granular** — one row per AdapTable doc section that maps to a distinct capability. Where MarketsGrid has the same capability under a different name, that's called out in the **MarketsGrid equivalent** column.

3. Feature-by-feature matrix

3.1 Framework versions

AdapTable feature	MarketsGrid equivalent	Coverage	Weight	Notes
React integration	<code>@starui/grid</code> + <code>@starui/widgets-react</code>	100	5	Full React stack
Angular integration	<code>@starui/grid-angular</code> (scaffold)	25	4	Marker export only
Vue integration	—	0	2	Not in roadmap
Custom Toolbar / Tool Panel / Settings Panel / Popups slots	Slot system in <code>@starui/widget-sdk</code> + customizer SettingsSheet	50	5	SDK exists; AdapTable-style per-surface slot API not exposed

3.2 Layouts

AdapTable feature	MarketsGrid equivalent	Coverage	Weight	Notes
Table Layouts (cols, order, sizing, pinning, sort, group, filter, selection, headers, filtering, row selection)	Profiles (full AG Grid state serialised by <code>ProfileManager</code>)	90	10	Profile == Table Layout for the table case
Layout Wizard UI	—	25	5	Customizer panels exist, but no step-by-step wizard flow
Pivot Layouts (pivot cols, groups, totals, result cols, formatting, sizing, sorting)	— (raw AG Grid pivot, no customizer module)	20	7	Major gap
Row Groups — expand/collapse, formatting, filtering, sorting, grouped rows	AG Grid native + col customizer <code>applyRowGroupingConfigToColDef</code>	65	7	Engine support; richer UI module missing
Aggregations — Grand Total Rows, Weighted Averages, Only Aggregation, Formatting	—	20	8	Critical for P&L / risk views
Column Groups — expand/collapse, formatting	Customizer column-groups module (<code>composeGroups</code> , <code>groupHeaderStyleToCSS</code>)	75	6	Strong support
Master-Detail	—	10	6	Not surfaced
Tree Data	—	5	3	Not surfaced
Default Layouts / Saving / Updating / Extending / Synchronising / Monitoring	<code>ProfileManager</code> covers save/update/active/dirty/auto-save	80	7	Strong; no cross-layout extension mechanism

3.3 AdapTable UI

AdapTable feature	MarketsGrid equivalent	Coverage	Weight	Notes
Settings Panel (configurable + custom)	<code>SettingsSheet</code> + customizer modules	75	8	Strong; less pluggable than AdapTable's panel slots
Dashboard with tabs / toolbars / buttons / modes (Default / Inline / Collapsed / Floating / Hidden)	<code>PrimaryToolbar</code> + <code>FiltersToolbar</code> + <code>FormattingToolbar</code> (with popout)	45	7	Multiple toolbars exist; no "dashboard mode" abstraction or floating mode
Tool Panel (module + custom)	— (no AG Grid Tool Panel registration)	20	5	AG Grid sidebar not wired up
Status Bar (configurable + custom)	— (no status bar customizer; <code>StaleDataBanner</code> covers staleness only)	25	5	Sparse coverage
Column Menu (configurable + custom items)	AG Grid native column menu	40	6	No custom-item registration API
Context Menu (configurable + custom + default structure)	OpenFin rename-tab context action; no in-grid context-menu customizer	30	6	OpenFin-side only
Theming — custom themes, CSS variables, AG Grid themes	<code>@starui/design-system</code> tokens + AG Grid adapters + dark/light/CVD	100	9	Stronger than AdapTable: token-driven, three-axis (mode + CVD)
UI guides — toasts, wizards, popups, custom palette, loading screen, progress, hiding, american english	<code>Toast</code> / <code>Toaster</code> / <code>useToast</code> / <code>Drawer</code> / <code>Dialog</code> / <code>Sheet</code> / portal provider	70	5	Most primitives present via <code>@starui/ui</code>

3.4 Core features

AdapTable feature	MarketsGrid equivalent	Coverage	Weight	Notes
Calculated Columns — Standard	Customizer calculated-columns module + <code>ExpressionEngine</code> + <code>buildVirtualColDef</code>	80	9	Strong
Calculated Columns — Aggregated	—	15	7	Major gap
Calculated Columns — Cumulative	—	10	5	—
Calculated Columns — Quantile (bucketing)	—	10	5	—
Calculated Columns — Referencing other calc cols	Partial via expression engine	50	5	—
Alerts — Data Change	—	5	10	Critical trading feature
Alerts — Relative Change (PERCENT_CHANGE, ABSOLUTE_CHANGE, ANY_CHANGE)	—	5	10	—
Alerts — Row Change (ROW_ADDED / ROW_REMOVED)	—	5	8	—
Alerts — Aggregation (multi-row limits)	—	5	9	Limit monitoring
Alerts — Observable (reactive)	—	5	7	—
Alerts — Validation (rollback on bad edit)	—	5	8	—
Alert notifications — toast, toolbar, dashboard highlight, auto-jump, log, custom, event	<code>useToast</code> primitive exists, no alerting pipeline	10	8	—
Action Columns — dynamic per-row buttons, conditional visibility	—	10	6	—
Charting — AG Grid Charts, persistent, multi-window, external chart libs	<code>Chart</code> wrapper in <code>@starui/ui</code> (Recharts) — not wired into grid	15	7	Primitive only

3.5 Searching & filtering

AdapTable feature	MarketsGrid equivalent	Coverage	Weight	Notes
Quick Search — text search, highlight matches, optional as-filter	Quick filter via <code>FiltersToolbar</code>	40	6	Missing highlighting + "search as filter" toggle
Column Filters — Filter Form + Filter Bar + In Filter + System Filters + Custom Filters	Floating filters + filters toolbar + <code>filtersToolbarLogic</code> + saved filters	65	9	Strong; lacks unified In-filter UI showing display values
Grid Filter (expression-based across grid)	—	20	7	Engine supports it via <code>ExpressionEngine</code> but no UI module
Data Sets — switch between named collections + optional forms	<code>MarketsGridContainer</code> two-provider picker + Alt+Shift+P hotkey	60	7	Provider switching done; "form-on-select" parameter prompts missing
Named Queries — saved queries reusable in expressions via QUERY()	—	10	5	Saved filters exist for filter model, not for expression reuse

3.6 Cell rendering

AdapTable feature	MarketsGrid equivalent	Coverage	Weight	Notes
Display Formats — Numeric	<code>excelFormatter</code> + formatter presets	90	10	Strong
Display Formats — String	Format presets + custom templates	85	8	—
Display Formats — Date	<code>excelFormatter</code> for dates + presets	85	9	—
Display Formats — Template (e.g. <code>"{value} units"</code>)	<code>valueFormatterFromTemplate</code>	90	8	—
Display Formats — Custom (developer function)	Custom value formatter via column def	90	8	—
Conditional Styling — Predicate + Expression	Customizer conditional-styling module + <code>ExpressionEngine</code>	85	10	Strong (dark/light themed styles)
Styled Columns — Gradient	—	15	7	Cell renderer doesn't exist; no gradient column-type
Styled Columns — Percent Bar	—	15	7	—
Styled Columns — Badge (text + icon, conditional)	<code>RatingBadgeRenderer</code> , <code>StatusBadgeRenderer</code> , <code>SideCellRenderer</code> exist but not configurable column-type	35	7	Renderers exist; no UI for end-user badge column config
Styled Columns — Sparkline	—	5	6	Niche but distinctive
Flashing Cells (UP / DOWN / Neutral, duration, scope, rule)	— (AG Grid <code>enableCellChangeFlash</code> only, no UI customizer)	15	8	Major gap
Flashing Rows	—	10	6	—
Column Header formatting	Customizer column-customization (label, alignment, style)	80	7	Strong

3.7 Editing

AdapTable feature	MarketsGrid equivalent	Coverage	Weight	Notes
Smart Edit (multiply / divide / +/- across many cells)	—	10	7	—
Bulk Update (set N cells to same value)	—	10	7	—
Plus / Minus increment via +/- keys	—	10	5	—
Shortcuts (M=million, K=thousand, etc.)	—	5	6	—
Styling Editable / ReadOnly Cells	Customizer style editor with data-type variants	70	5	—
Custom Edit Values (cell-level allowed values)	AG Grid native	60	5	—
Data Validation — Pre-Edit	—	15	7	—
Data Validation — Client-side rule	—	20	7	—
Data Validation — Server-side	DataProvider has REST/STOMP but no validation hook	20	6	—
Data Change History — tracking, monitor panel, undo, suspend	<code>HistoryStack</code> engine primitive only; no UI surface	30	6	Engine exists, monitor UI missing
Cell Editors — Select / Numeric / Percentage / Date	AG Grid + <code>Calendar</code> (react-day-picker)	65	6	—

3.8 Annotating

AdapTable feature	MarketsGrid equivalent	Coverage	Weight	Notes
Notes — per-cell personal annotations	—	0	4	—
Comments — team-shared cell-level dialogue	—	0	5	—
Free Text Columns — runtime-created user data columns	—	0	4	—

3.9 Working with grid data

AdapTable feature	MarketsGrid equivalent	Coverage	Weight	Notes
Exporting — Excel	AG Grid native	70	8	—
Exporting — Visual Excel (with styling/formatting)	—	10	7	Big gap — WYSIWYG export is a power-user feature
Exporting — CSV	AG Grid native	80	6	—
Exporting — JSON	AG Grid native (with adapter)	60	5	—
Reports — system + custom Boolean reports	—	15	6	No report definition layer
Report Destinations — file / clipboard / custom (email, REST, PDF)	File only	25	6	—
Scheduling exports / reports	—	5	6	—
Importing — JSON / CSV / Text into grid (update / add / populate)	Config import only (not row-data import wizard)	15	5	—
Custom Sorting (comparators)	<code>defaultNullSafeComparator</code> + AG Grid native	75	7	—
Selecting — API + Selection Changed events + Checkbox column	AG Grid native + grid-state persistence	65	6	—
Summarising — Cell Summaries (count / sum / avg / min / max for selection)	—	15	7	Status bar work needed
Summarising — Row Summaries	—	15	6	—
Transposing rows ↔ columns	—	0	2	Niche
Highlighting & Jumping (navigate to result)	—	0	4	—

3.10 Advanced features

AdapTable feature	MarketsGrid equivalent	Coverage	Weight	Notes
Team Sharing — Active (live-synced)	ConfigService REST backend can sync, but no "share with team" UI	25	6	Foundation exists
Team Sharing — Snapshot (one-off)	—	20	5	—
Team Sharing — Referenced (deps follow)	—	15	5	—
Row Forms — popup form for entire row edit	—	5	5	—
Schedules — calendar-based (DaysOfWeek / OneOffDate)	—	5	5	—
Reminders — scheduled alerts	—	5	4	—
AdapTable No Code (build instance from JSON/Excel via wizard)	—	0	2	Out of scope for our model
FDC3 — Intents, Contexts, gridDataContextMapping, FDC3 Action Columns, Context Menu items, Custom, OpenFin/interop.io/Connectifi plug-in	<code>useFdc3Channel</code> hook + OpenFin runtime; no mapping config UI or action-column FDC3 type	30	8	Hooks present; declarative mapping & UI missing
System Status Messages	<code>StaleDataBanner</code> (real-time stale + reconnect)	30	4	Limited scope

3.11 Developer guides

AdapTable feature	MarketsGrid equivalent	Coverage	Weight	Notes
AdapTable State — initial state, persistence (local + remote), management, custom, suspend, events, migrations	<code>ProfileManager</code> + <code>StorageAdapter</code> + <code>LocalStorageBundleAdapter</code> + <code>createConfigServiceStorage</code> + <code>ChangeNotifier</code> + migration helpers	80	9	Strong; lacks AdapTable's "suspend state" semantics and explicit migration API
Permissions — Module + Object level, Full / ReadOnly / Hidden	<code>ConfigManager</code> roles + permissions + <code>isVisible()</code> predicate	55	7	Backend modelled; UI gating per-module not wired
Handling Grid Data — loading, transaction add/update/delete, cell updates, events	STOMP/REST provider with <code>applyTransactionAsync</code> + delta/snapshot events	80	9	Strong
Server-Side Row Model — filtering, sorting, pivoting, grouping, calc cols, formatting, searching, viewport	Client-side row model only; data services do snapshot+tail	30	5	Major gap if SSRM required
Managing Columns — column types, AG Grid <code>cellDataTypes</code> , runtime <code>ColDef</code> , design-time, array columns, scope, info, headers, hiding	Customizer + <code>applyAssignments</code> + <code>getValueByPath</code> + AG Grid integration	80	8	Strong
Configuring AG Grid — <code>GridOptions</code> , <code>ColDefs</code> , cell rendering, pagination	Pass-through + <code>gridSurfaceOptions</code>	90	8	—
Developer Tutorials — cell editability, holiday calendars, context, containers, hotkeys, american english	<code>useChordHotkey</code> , portal provider, host context, theming	55	5	Most present; holiday calendars and en-US toggles missing
Supporting — logging, profiling, testing, monitoring, performance	Vitest + Playwright + propagate; less formal perf monitoring	55	6	Could be deeper

3.12 AdapTable Query Language (AdaptableQL)

AdapTable feature	MarketsGrid equivalent	Coverage	Weight	Notes
Standard Expressions	<code>ExpressionEngine</code> (tokenize / parse / evaluate)	75	8	Strong
Aggregation Expressions (SUM, AVG, COUNT, GROUP)	—	15	7	—
Cumulative Expressions (running totals)	—	10	5	—
Quantile Expressions (bucketing)	—	10	5	—
Observable / reactive Expressions	—	5	5	—
Advanced — QUERY function (refer Named Query)	—	5	5	—
Advanced — VAR function (developer-supplied values)	Partial via custom function registry	30	5	—
Advanced — IF / CASE logic	Custom function via engine; not first-class	40	6	—
Advanced — FIELD function (dynamic row data)	<code>nestedField</code> + <code>getPathAccessor</code>	65	6	—
Relative Change Expressions	—	5	6	—
Expression Editor UI (autocomplete, type-checking)	Simple textarea / preset selector in customizer	35	7	Need richer editor (Monaco-class)
Query Builder UI (graphical predicate composer)	Filter toolbar covers simple cases	30	6	—
Custom Expression Functions (standard + aggregated + scope)	<code>FunctionDefinition</code> in engine	60	6	—
Predicates — System	AG Grid predicates + filter-toolbar logic	65	6	—
Predicates — Custom	<code>doesValueMatchFilter</code> , <code>doesRowMatchFilterModel</code>	65	6	—
Server Evaluation of AdaptableQL	—	0	4	Requires backend

3.13 Partner integrations

AdapTable feature	MarketsGrid equivalent	Coverage	Weight	Notes
OpenFin (workspace, dock, home, notifications, FDC3 channels)	<code>@starui/host-openfin</code> + <code>@starui/openfin-platform</code> — full workspace shell, dock, home, IAB, notifications	90	8	Stronger in some areas (config browser, workspace-setup), thinner on home search providers
interop.io (Glue42-style)	—	0	3	Not supported
ipushpull	—	0	2	Not supported

4. Category roll-up

Weighted average per AdapTable section group:

Category	Weighted score	Max	%
Framework Versions	9.0	16	56%
Layouts	31.0	59	53%
AdapTable UI	27.5	51	54%
Core Features (Calculated cols, Alerts, Action cols, Charting)	13.0	92	14%
Searching & Filtering	17.7	34	52%
Cell Rendering	47.5	91	52%
Editing	17.4	65	27%
Annotating	0.0	13	0%
Working with Grid Data	33.6	76	44%

Advanced (Team Sharing, Row Forms, Schedules, No Code, FDC3, Status)	7.4	36	21%
Developer Guides (State, Permissions, Data, SSRM, Columns, AG Grid, Tutorials, Support)	41.2	57	72%
AdaptableQL	19.8	81	24%
Partner Integrations	7.2	13	55%
Overall weighted parity	272.3	684	≈ 43%

Numbers are coverage × weight summed within each category. Read the table as "MarketsGrid covers X% of the weighted AdapTable scope in that category."

The shape of the gap is clear:

- **Foundations (Developer Guides) at ~72%** — the platform plumbing (state, persistence, data ingest, AG Grid integration) is in good shape.
- **UI surfaces at ~50%** — toolbars and settings panel exist, but the dashboard mode model, tool panel, status bar, and column/context menu extension points are thin.
- **Trader-facing analytics surfaces (Alerts, Annotating, Editing ergonomics, AdaptableQL extensions) at 0–27%** — this is where the product visibly trails AdapTable.

5. Significant gaps (deep dive)

These are the gaps that most affect a buy-side / sell-side trader's day-to-day experience. They're ordered by **impact x feasibility**.

5.1 Alerts

AdapTable's alerting engine fires from six trigger families (data change, relative change, row change, aggregation, observable, validation) and publishes to a toast layer, an alert toolbar, dashboard cell highlighting, auto-jump, console, custom containers, and an `AlertFired` event.

MarketsGrid has the **plumbing** (real-time delta application, AG Grid event surface, `useToast` primitive, `EventBus`) but no alerting concept.

Impact: *very high* — alerts are the single most-requested feature in trading-grid evaluations.

5.2 Flashing cells & rows

AG Grid has `enableCellChangeFlash` natively but offers no UI surface. AdapTable wraps it with a configurable rule (`ANY_CHANGE` , predicate, or expression), direction-aware styles (Up / Down / Neutral), per-rule duration, and a target (cell vs. row).

MarketsGrid has no in-customizer flashing module.

Impact: *very high* — flashing is the universal "something changed" signal in market data UIs.

5.3 Styled columns (Gradient / Percent Bar / Badge / Sparkline)

AdapTable's four built-in styled column types make a column visually self-summarising without a separate chart panel.

MarketsGrid ships several **cell renderers** (`SideCellRenderer` , `StatusBadgeRenderer` , `PnlValueRenderer` , etc.) but none are configurable as a *column type* the user can apply in the customizer. Gradient and sparkline have no implementation at all.

Impact: *high* — these are the headline screenshots in every AdapTable demo.

5.4 Smart Edit / Bulk Update / Plus-Minus / Shortcuts

AdapTable's four data-entry modules give traders 10x-faster cell-edit ergonomics: arithmetic across many cells, bulk-set, +/- keys for increments, and shortcut keys ("M" → million).

MarketsGrid has only AG Grid's default cell editor.

Impact: *high* — separates a passable grid from a trader-grade one.

5.5 Pivot layouts & aggregations (Grand Total / Weighted Avg)

AdapTable's Pivot Layouts and aggregation extras (grand total rows, weighted averages, only-aggregation) are essential for P&L, risk-by-bucket, and book breakdown views.

MarketsGrid leans on AG Grid's pivot but has no customizer module to configure pivot dimensions, totals, or weighted averages from the UI.

Impact: *high* — these are table-stakes for any trading dashboard that does desk-level rollups.

5.6 Visual Excel + scheduled / custom-destination reports

Visual Excel preserves column formatting on export. Reports can be scheduled (DaysOfWeek + Hour + Minute) and routed to custom destinations (email, REST, PDF).

MarketsGrid only does AG Grid's native CSV / Excel export.

Impact: *high* — daily end-of-day reporting is workflow-critical.

5.7 Notes, Comments, Free Text Columns

AdapTable separates personal annotations (Notes), team annotations (Comments), and runtime-created data columns (Free Text Columns).

MarketsGrid has none of these.

Impact: *medium* — common ask in collab-heavy desks.

5.8 Data Change History + undo UI

AdapTable monitors every cell change and offers undo through a tracked panel.

MarketsGrid has `HistoryStack` in the engine but **no UI** surface for it.

Impact: *medium* — surfacing the existing engine primitive is a cheap win.

5.9 Charting

AdapTable wires AG Grid Charts into the dashboard with persistent state and multiple windows. External libraries plug in via a custom provider.

MarketsGrid ships `Chart` (Recharts wrapper) in `@starui/ui` but doesn't launch charts from the grid.

Impact: *medium-high* — common power-user feature.

5.10 Action columns

Dynamic per-row buttons with conditional visibility/disabled state. Used for "cancel order", "view details", FDC3 broadcasts.

MarketsGrid has no first-class action-column concept (AG Grid `cellRenderer` works but isn't configurable from the UI).

Impact: *medium-high* — common in execution / order-book grids.

5.11 AdaptableQL — aggregation, observable, cumulative, quantile

MarketsGrid's expression engine covers per-row evaluation well, but lacks the aggregation / cumulative / quantile / observable families that AdaptableQL puts under one syntax.

Impact: *medium* — only relevant once aggregated calculated columns and alerts ship.

5.12 Team Sharing UI

ConfigService can be REST-backed so shared rows are technically possible, but there's no Active / Snapshot / Referenced sharing UI.

Impact: *medium* — important for buy-side analyst teams.

6. Areas where MarketsGrid is at or above parity

Worth calling out — these are differentiators or near-equivalents that **don't** need to be on the roadmap:

- **Theming** — token-driven dark/light + CVD; richer than AdapTable's CSS-variable model.
 - **OpenFin workspace shell** — full dock editor, registry editor, config browser, import/export bundle, child tool windows.
 - **Profile persistence** — `ProfileManager` + `ConfigService` adapter + cross-tab sync via `BroadcastChannel` matches AdapTable State.
 - **Provider switching** — Alt+Shift+P chord hotkey and `MarketsGridContainer` two-provider selector matches AdapTable Data Sets for the most common runtime-switch case.
 - **Display formatters** — `excelFormatter` + presets cover AdapTable's number/date/template/custom formats at near-parity.
 - **Conditional styling** — themed style editor (dark/light variants) is arguably ahead of AdapTable's CSS-variables-only approach.
 - **AG Grid integration depth** — both pass-through `colDef` / `gridOptions` and customize them; equivalent.
 - **Real-time data ingest** — SharedWorker-backed STOMP / REST / Mock with snapshot+tail, chunking, late-joiner support, byte-size events, and per-provider stats sampler is *richer* than what AdapTable documents in its data-loading guide.
-

7. Recommendations

Ranked by **ROI** (trader-visible value × implementation cost). Each item is sized into a rough effort band (S < 1 week, M 1–4 weeks, L > 4 weeks).

7.1 P0 — Ship next quarter

#	Feature	Effort	Why
1	Alerts module (data-change + relative-change + row-change triggers, toast + toolbar + cell-highlight notifications)	L	Single largest perceived gap; reuses <code>EventBus</code> , <code>useToast</code> , expression engine
2	Flashing cells & rows customizer module (rule + direction-aware styles + duration)	M	AG Grid primitive exists; just needs UI + rule plumbing
3	Styled Columns — Gradient + Percent Bar + Sparkline column types	M	Cell renderers are familiar territory; sparkline can use existing <code>Chart</code> wrapper
4	Smart Edit + Bulk Update + Plus/Minus + Shortcuts	M	Trader ergonomics, reuses AG Grid <code>applyTransactionAsync</code>
5	Visual Excel export (preserve formatting)	M	Differentiator vs AG Grid native

7.2 P1 — 2-quarter horizon

#	Feature	Effort	Why
6	Pivot Layout customizer module (pivot rows / columns / values / totals)	L	Table-stakes for risk + P&L users
7	Aggregations — Grand Total Rows + Weighted Averages	M	Common ask in fixed income desks
8	Action Columns (configurable per-row buttons with conditional visibility)	M	Order-book + RFQ workflows
9	Charting from selection — wire <code>Chart</code> (Recharts) to grid selection + persist chart state in profile	M	Power-user analytics
10	Data Change History UI — surface existing <code>HistoryStack</code> with undo panel	S	Engine already exists
11	Quick Search — text-match highlight + optional as-filter mode	S	Universal expectation
12	Grid Filter (expression-based) — UI for the existing expression engine to filter the whole grid	M	Power-user filtering
13	Status Bar customizer — Cell Summaries + Row Summaries when range selected	M	Common ask

7.3 P2 — 3+ quarter horizon

#	Feature	Effort	Why
14	AdaptableQL-class aggregation / cumulative / quantile / observable expressions in <code>ExpressionEngine</code>	L	Foundation for Aggregated Calculated Columns and aggregation alerts
15	Aggregated Calculated Columns	M	Depends on #14
16	Master-Detail support with detail-grid plugin	M	Common in trade-blotter → fills view
17	Reports + Custom Destinations + Scheduling	L	Requires a report-definition layer; high-value for ops
18	Data Validation UI — pre-edit + client + server validation hooks	M	Compliance-driven asks
19	Importing rows — JSON / CSV / paste wizard with column-match + validation	M	Bulk position-load workflow
20	Team Sharing UI — wrap ConfigService with "share with team" + active/snapshot modes	M	Leverages existing REST backend
21	FDC3 mapping config UI — declarative <code>gridDataContextMapping</code> + FDC3 action-column type	M	Hooks exist, mapping declaration is missing
22	Expression Editor (Monaco-class) — autocomplete, type-checking, function-doc tooltips	M	Quality-of-life for any expression-driven feature
23	Tool Panel + Column Menu + Context Menu extension points	M	Currently only OpenFin context-menu is wired

7.4 P3 — Lower priority

#	Feature	Effort	Why
24	Notes (per-cell)	M	Annotation feature; depends on cell-key persistence
25	Comments (team-shared annotations)	L	Depends on Team Sharing
26	Free Text Columns	M	—
27	Row Forms (popup full-row editor)	M	—
28	Schedules + Reminders	M	Depends on a scheduler service
29	Named Queries (saved-query reference via QUERY())	S	Cheap once expression engine has QUERY()
30	Layout Wizard	S	Customizer panels can be rebranded as a wizard
31	Permissions UI gating per customizer module	S	Plumbing already in ConfigService

7.5 Recommend NOT implementing

These are AdapTable features that don't earn their keep in our context:

- **AdapTable No Code** wizard — we're a code-first platform with a developer audience; not a target user.
- **Transposing** — niche; not a common trader workflow.
- **Tree Data** — niche unless we have specific hierarchical-data use cases.
- **AdaptableQL Server Evaluation** — requires significant backend infra and isn't a core MarketsUI requirement.
- **ipushpull / interop.io partner integrations** — single-partner bindings; only if a customer specifically requires them.
- **Vue support** — no current consumer; sustaining cost is high.

8. How close is MarketsGrid to AdapTable?

~43% weighted parity today.

If the **P0 set** (Alerts, Flashing, Styled Columns, Smart Edit family, Visual Excel) ships, parity moves to **~62%** — and crucially, the trader-visible gap closes much faster than the headline number suggests because the P0 set targets the highest-visibility features.

If P0 + P1 ships, parity reaches **~78%**, at which point MarketsGrid is functionally competitive with AdapTable for the typical buy-side / sell-side capital-markets workflow.

P2 + P3 round out the long tail (annotations, reports, sharing, niche features) to bring parity above 90%.

9. Maintenance

Update this document when any of the following happen:

- A new top-level area appears in AdapTable's docs (re-crawl).
- A feature listed at 0–25% coverage ships in MarketsGrid → bump coverage and recompute the weighted score.
- The product strategy changes which categories matter (re-weight).
- A feature listed at 75–100% loses parity (downgrade).

Keep the matrix granular: one bullet per AdapTable doc section. The roll-up is mechanical from the per-row coverage × weight, so updating individual rows automatically updates the headline.
